	High Threat
	Moderate Threat
	Slight Threat
	No Discernible Threat

WEATHER SYNOPSIS BY REGION

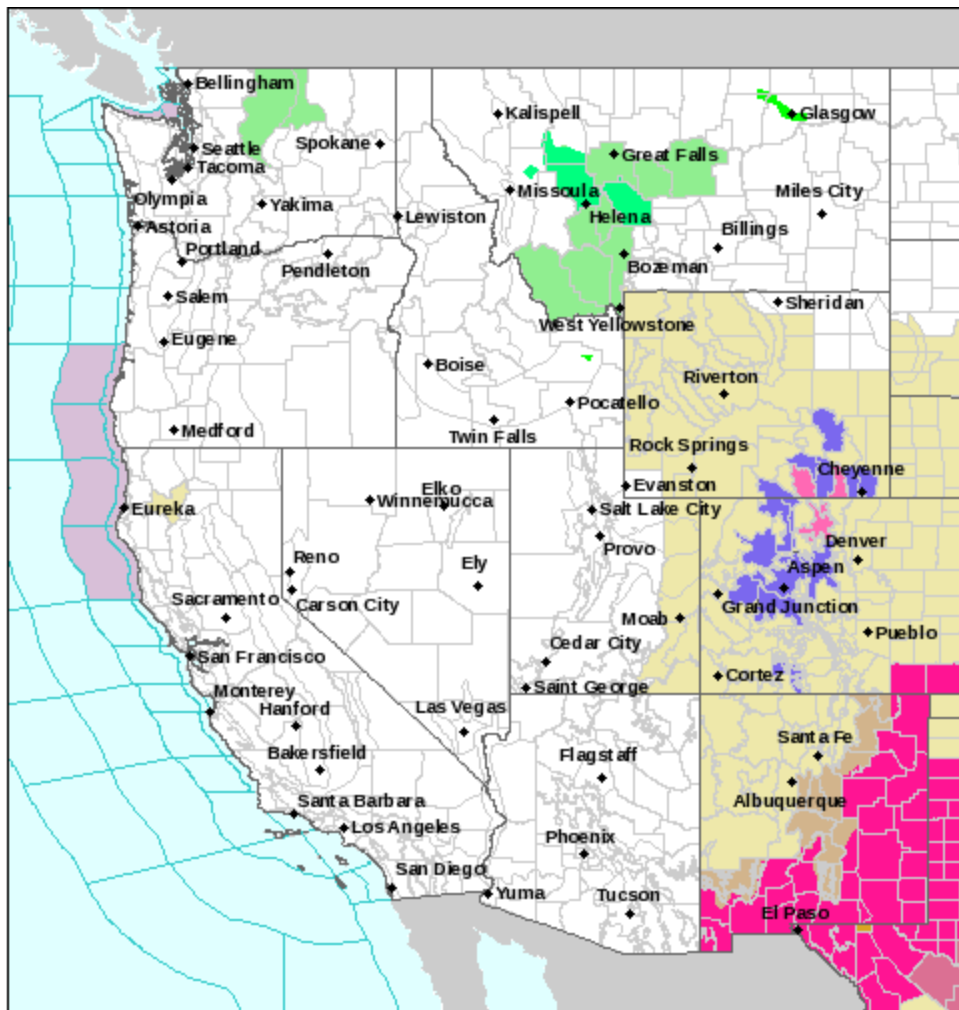

NORTHERN CALIFORNIA

A high pressure ridge will bring warmer, drier weather to the region over the next few days. Winds will be lighter than the past few days, with winds becoming southerly to westerly Thursday through the weekend. An ongoing drying trend with warm temperatures will continue. There is a small chance of some mountain showers in the north this weekend as a weak weather system moves through the region. However, cooler temperatures are not expected. Warmest areas are expected to be around the 90s early next week as high pressure returns over the region.

SOUTHERN CALIFORNIA

A ridge of high pressure will build into California from the Pacific Ocean bringing substantial warming and drying to the region Thursday and Friday. Temperatures will be near normal Thursday and then 10 to 15 degrees above normal Friday. Minimum humidity will still be mainly above 30% Thursday and then be between 15% and 30% Friday. There will be little change in temperature Saturday as the ridge remains in place and then temperatures will gradually cool Sunday through early next week as the ridge of high pressure weakens a little. Minimum humidity will be mainly in the teens above and inland from the marine layer Saturday through early next week. No significant winds are anticipated across the region through early next week.
